

MOBILE ALERT APP SOCIAL SHARE

Social Share incrementally increases the power of your critical communications.

The Social Share feature on the CodeRED Mobile Alert app - the nation's most downloaded public safety notification app - allows individuals to post emergency and community alerts to their personal social media accounts, helping to alert additional family, friends and followers.

Sharing couldn't be easier. To share a notification to personal social media platforms, a citizen must first download the free CodeRED Mobile Alert app on any iOS or Android device. As notifications are received, the user can select alerts of interest and tap the "share" button on their device. Alerts may be shared to the user's preferred personal social media platforms (i.e. Twitter, Facebook and LinkedIn) or they can be sent via email or text directly to other individuals.

Family, friends and followers who view the shared content will see:

- The title of the alert
- A brief description
- An image or video
- A link to view additional details

Encourage everyone to download the CodeRED Mobile Alert today - spread your message far and wide, fast!
